

## **Jax Oleum – Urethane Deck Oil**

It is the latest Urethane modified oil technology providing optimum protection on hard and soft wood. The reactive urethane groups in the resin react with the lignin in the timber and together with the light fast pigments, retard the degradation process.

### **Instructions**

1. Sand the wood down to a smooth finish making sure all previous coatings are removed.
2. Use a damp cloth to remove all dust, ensure the surface is dry before application.
3. Shake the tin well and apply the oil with a fine pile roller, brush, soft cloth or a buffing machine.
4. Allow to soak in and dry for around 15 minutes.
5. Remove excess with a cloth or buffing machine.
6. Cure time is around 6 hours for light traffic, with no water based cleaning for 14 days.
7. Re-apply another coat 3 to 6 months after the 1st coat & then re-apply annually.
8. Soak cloths in water after use to prevent spontaneous combustion of them.

1 litre covers 20 to 40 square metres, depending on the type and absorption rate of the wood.

### **Colour Range**

1. Bone
2. Dark Gunmetal
3. Dark Mahogany
4. Dark Oak
5. Extra Black
6. Light Grey
7. Mahogany
8. Natural
9. Smoke
10. Weathered
11. White
